

# JOBS YOU CAN DO TO HELP THE PLANET

Most people know it is good to recycle, use less electricity, and care for wildlife to reduce the effect of climate change. But the job you choose can make a difference too.

As an **electrician** you could learn how to fit solar panels.

As a **plumber**, learn out to fit heat pumps, a new kind of heating that is better for the planet.

If you become a **chef**, learn how to use local ingredients that have been produced sustainably.

If you become a **builder** or **engineer**, you can help build 'net zero' homes for the future.

Or what about becoming a **farmer**, and learning to look after our soil and grow crops in a way that isn't harmful to nature.

If you work in **hair and beauty**, you can learn how to use organic products and recycle what you use in your salon.
